

FORGOODCODE

**“I THINK I’M TOO DUMB
FOR PROGRAMMING”**

I think the biggest hurdle
for new programmers
is **problem solving**.

Abi Bouhmaida
@forgoodcode

That confuses a lot of beginning programmers.

They think they are having difficulty with programming, but what they are actually doing is having difficulty with thinking about problems.

Abi Bouhmaida
@forgoodcode

The first thing you should do when you get an assignment is to sit down with a pencil and paper and work the problem.

Abi Bouhmaida
@forgoodcode

If I said

"I made a 25 minute call,
how much did it cost?"

Could you calculate it?

Abi Bouhmaida
@forgoodcode

I'm not asking you to write the code, could you do the procedure?

Abi Bouhmaida
@forgoodcode

Look at the steps you do.
Look at the decisions you
make. Write down the
process – in detail. Be as
specific as possible.

Abi Bouhmaida
@forgoodcode

Once you've done that,
then you are ready to
write the code.

Abi Bouhmaida
@forgoodcode

There's no class or training people receive for basic problem solving. There's math but it's so linear and concrete in it's approach.

Abi Bouhmaida
@forgoodcode

10/10

well if you were too
stupid for programming
you wouldn't have
figured it out at all.

Abi Bouhmaida
@forgoodcode
